

Chilling Systems

TS Designs Chilling Systems use stainless steel refrigeration coils that can be stand alone system or added to almost all of

TS Designs Washers. The coils can be mounted in side of the tank or above the conveyor belt where the water would run down over the coils. The coils can get the water down to approximately 33 to 36 degrees. Different tonnage's are put into different applications. Determining factors are inlet water temp, product, product temp, volume, initial chill time, dwell time, room temperature, and type of system.
