

Leafy Grader

The Leafy Product Grader is designed to remove particles and sand from leafy vegetables. The product is placed onto the grader, then moves down the length of grader on a stainless steel chain to bounce up and down, throwing the leaves into the air and allowing the product to tumble, improving the grading. This action causes the small unwanted particles to fall through the chain and down onto a waste chute, which moves the waste to the outside of the grader. The two individual inverters allow infinite speed control of the product chain and the grader rolls, allowing longer or shorter grading times. This grading machine will grade virtually all leafy products.

Solidly Built to Perform for the Long Run

- 304 Stainless Steel Construction to withstand the toughest environments.
- Stainless Steel Product Chain.
- Individual Speed Controls.
- Nickel Plated Bearings.
- Wash-Down Motors.

Height	75"
Width	48"
Length	120"
Weight	1000 LBS
Power	208/230/460 3 phase
