

★ **Now Available with Out-of-Balance Shut Off w/508 UL Panel**

ISO-Dryer

Upgrades Include:

- Out-of balance shut off
- 508 UL Panel
- Barrel hold downs
- Braking pod
- Automatic lubrication
- Electric door lock
- Mounted panel

32 Gallon Basket with 1/8", 3/16", 1/4", 5/16" or 3/8" holes **\$92.50**

32 Gallon Basket with 5/8", or 3/4" holes **\$115.50** *Prices subject to change*

Improved Performance

The ISO-Dryer was **designed for optimum production, low maintenance, and versatility.**

The unit was originally designed as a component of a complete cut, wash, and dry system; eliminating the transfer of product from one container to another, thereby minimizing damage caused by unnecessary product moves. The simplified design allows easy access to all mechanical components (with complete disassembly possible in as little as ten minutes). All components are off-the-shelf, supporting a quick turnaround.

The Dryer's isolation system is designed to absorb much of the centrifugal shock load, ensuring smooth operation and long bearing life. Electronic components are UL, CUL and CE approved.

Electronic acceleration and braking ensure increased production through short startup and shutdown times - and eliminate the expense of replacing mechanical brakes.

The Dryer is constructed of stainless steel to withstand wear and tear in the toughest environments.

Stainless steel motor, gas assist shocks and hermetically sealed non-contact safety interlock switches are standard components.

75 lb. Capacity per load
