

Jr. Dryer

The Jr. Dryer has been designed around production, maintenance, and versatility. The Jr.-Dryer is a designed component of a complete cut, wash, and dry system, eliminating the transfer of product from one container to another and minimizing damage caused by the moves. The simple design allows easy access to all mechanical components. All components are off-the-shelf for a quick turnaround.

The Dryer's isolation system is designed to separate the centrifugal shock load from the main frame to the outer skin, ensuring smooth operation. Electronic components are UL, CUL and CE approved.

Dryer is constructed of stainless steel to withstand wear and tear in the toughest environments.

Stainless steel motor and hermetically sealed non-contact safety interlock switches are standard components.

Water is channeled to 2" npt drain. Quick adjustable legs make installation a snap.

- *Optional Variable Speed*
- *Optional Braking*

50 lb. capacity per load

20 Gallon Basket with 1/8", 3/16", 1/4", 5/16" holes \$81.50
